WEDNESDAY

FRIEDERIKE DOLL

The biggest leap in the prevention of Alzheimer's disease is a major breakthrough to help save the lives of those who have already developed the disease.

debut

The US Army Corps of Engineers (USACE) has announced a $1.7 billion award to a joint venture led by Balfour Beatty Infrastructure (BBI) andKKR Capital Partners L.P. (KKR) to build, finance, design, operate and maintain the new River Basin System in the United States.

The new system will be the largest civil infrastructure project in the United States and is expected to create approximately 10,000 jobs.

The project is part of the Army's Comprehensive Plan to address the flooding of the Mississippi River Basin, which has been experiencing severe flooding in recent years.

The project will include the construction of new levees, dams, and flood control structures to protect the leveed areas from future floods.

The project is expected to be completed in 2024.

The award was announced by USACE and Balfour Beatty, with Balfour Beatty's Chairman and CEO, Jim Maguire, saying, "We are honored to be awarded this significant project and look forward to working with our partners to deliver this critical infrastructure for the benefit of the local community and the nation as a whole."

The award is the result of a competitive bidding process that began in late 2015.

The project will be funded through a combination of federal and state funds, with the USACE providing the majority of the funding.

The project is expected to create approximately 10,000 jobs over the course of the construction period.

The project is expected to be completed in 2024.
